

Q3. Develop Web Application using MySQL and PHP script to create

- **“Employee”** table with Emp_Id (Primary Key), Emp_Name (Not Null), Dept_Name (Not Null), Salary (Not Null)
- **“Department”** table with Dept_Id (Primary Key) and Dept_Name (unique)
- Insert at least 5 rows into both Employee and Department table by taking the user input through **HTML forms**.
- Display the department wise Emp_names using **HTML table**
- Display Emp_names whose salary is greater than the average salary of employees
- Delete the department, if there are less than 2 employees in that department
